

1. Make brief written notes (a pdf file) where you:
 - (a) explain concepts that are not discussed in class;
 - (b) outline your empirical approach (steps followed);
 - (c) discuss challenges and main findings.
2. Replicate paper results using R (an .R script); make sure it runs on any machine that has the necessary packages.
3. If you don't have enough data, generate simulated ones.
4. Prepare a 20-minute presentation and be ready to deliver it on the specified date. Broadly stick to the structure laid out in 1.
